GlaceEMR Awarded PCSP 2016 Auto Credits

March 29, 2016 Glenwood Systems announces that GlaceEMR was awarded PCSP 2016 (Patient Care Specialty Practice) Autocredit March 24, 2016 by NCQA. The PCSP recognition program for clinicians is designed to improve quality and reduce waste and poor patient experiences that result from poorly coordinated care. The program focuses on coordinating and sharing information among primary care clinicians and specialists. It requires clinicians to organize care around patients—across all clinicians seen by a patient—and to include patients and their families or other caregivers in planning care and as partners in managing conditions.

This program recognizes specialty practices that successfully coordinate patient care and communicate with their primary care colleagues, other specialists and patients. Like NCQA's Patient-Centered Medical Home (PCMH) program, **GlaceEMR PCMH Autocredit Award November 5, 2015**, PCSP recognition has specific expectations for providing timely access to care and continuous quality improvement. Practices who earn recognition have made a commitment to providing high quality patient-centered care.

About Glenwood
Glenwood Systems is a privately-held software development firm providing web-based medical practice software, billing services and custom software solutions to manage clinical documentation, workflow and revenue.

Glenwood Systems emphasizes product excellence, a high-level of customer service and exceptional stakeholder value. Founded in 1998, Glenwood Systems has established itself as a first to market leader offering EHR software, practice management software, physician billing services and custom software solutions. More information about Glenwood and the Glace family of products can be found at www.glenwoodsystems.com or contact Ron Flormann.

About NCQA Labs
NCQA's PCSP prevalidation evaluates electronic health record (EHR) systems, advanced registries, population health management tools, care coordination tools, patient engagement tools and other related health technology solutions providing functionality that completely meet or support factor-level requirements within applicable NCQA PCMH standards. If a health IT solution completely meets the functional requirements of a given factor, automatic credit, "autocredit" points are awarded. If the health IT solution provides significant functionality that aligns with the requirements of the PCSP standards for a given factor, but does not fully meet the factor level requirement, a "supporting" designation is awarded. Once a solution receives autocredit or a supporting designation for one or more factors, it is considered "prevalidated." Practices that use an NCQA prevalidated system with autocredit awarded to a factor do not have to submit documentation for that associated factor.

NCQA is a private, non-profit organization dedicated to improving health care quality. NCQA accredits and certifies a wide range of health care organizations. It also recognizes clinicians and practices in key areas of performance. NCQA's website (www.ncqa.org) contains information to help consumers, employers and others.
