Glenwood Systems, LLC Improves Medical Billing Process with GlaceComplete

Glenwood Systems, LLC (http://www.GlenwoodSystems.com) launches the GlaceComplete product suite which seamlessly integrates EMR and Practice Management software to an assisted medical billing process. The product has been designed to reduce the cost associated with clinical and billing inefficiency while maximizing revenue contribution for the average office based medical practice.

Waterbury, CT Thursday February 26, 2009 --- Glenwood Systems announces today the release of GlaceComplete, a combination of software, process and service constructed to improve medical practice revenue and reduce medical practice operation costs. Designed to be affordable via a web based model and to improve revenue in an office based medical practice, GlaceComplete seamlessly integrates easy to use EMR (electronic medical records) and practice management software to a proprietary medical billing process. GlaceComplete simplifies practice workflow, improves offices efficiencies, increases patient file security, frees office space, reduces operational cost and provides new revenue opportunities while maximizing a steady collection of contracted fees billed and the capture of CMS PQRI and e-Prescribing bonus payments.

"Now a physician can have complete oversight and transparency of the medical practice clinical and billing process via the GlaceComplete dashboard and free their staff of the mundane and repetitive administrative and medical billing tasks." states Nat Loganathan, Founder and CEO Glenwood Systems "Glenwood is focused on the business health of the practice so the physician can focus on patient health. We are all faced with very tough economic challenges; there is no reason that the average office based physician should let hard earned revenue go unrealized. Many of our clients experience additional bottom line contribution of $20,000 - $50,000 with the use of our proprietary software and assisted medical billing process."

Glenwood will be presenting the new GlaceComplete program at the ACP Internal Medicine 2009 conference in Philadelphia at the end of April.

Glenwood Systems is best known for its GlaceEMR and Glace Full Service Billing products designed to deliver a complete platform of software and services that encompass all aspects of clinical data management and encounter billing.
